PROFESSIONAL SUMMARY

Graduate of the Academy of Economic Studies in Bucharest, specialized in Tourism Business Administration (bachelor's and master's degrees). I have gained professional experience in accounting, where I developed skills in analysis, data processing, and attention to detail over four and a half years.

In 2025, I began the process of retraining in IT, and by March 2026, I had completed three intensive training programs: "Python Developer from Scratch" (Software Development Academy), "100 Days of Code: The Complete Python Pro Bootcamp" (Udemy), and "Full-Stack Web Development Bootcamp" (Udemy).

I gained solid knowledge in Python, web development (Django, Flask), automated testing (PyTest), databases (SQL), working with version control systems (Git, GitHub), and end-to-end application development. The courses I completed provided me with practical experience through numerous projects, simulations, and applied exercises, preparing me for entry-level roles in software development, web development, or databases.

PERSONAL PROJECTS

Project name: "Aprozar Digital"

Description: It is an online e-commerce platform specializing in the sales of fruits and vegetables.

Technologies used: Python | Django | HTML5 | Bootstrap5

My role: I developed the entire application infrastructure.

Results: The program runs on a local server, provides an interactive web interface, and has a database of over 60 products.

GitHub repository: https://github.com/xAndreiix/Aprozar_Digital

Project name: Machine Learning Model

Description: It is a simple machine learning project that demonstrates how to train, visualize, and export a music recommendation model.

Technologies used: Python | Jupyter Notebook

My role: I developed the entire model behavior.

Results: The program recommends music genres based on the user's age range and gender.
